

APLASTIC ANEMIA & MYELOYDYSPLASTIC SYNDROMES CAN STRIKE ANY PERSON, OF ANY AGE, ANY GENDER, OR ANY RACE, ANYWHERE IN THE WORLD

Aplastic Anemia and Myelodysplastic Syndromes

are non-contagious and often fatal blood diseases that occur when the bone marrow stops making enough healthy blood cells.

Although all of the causes are still unknown, they have been linked to toxins and viruses that we are in contact with every day.

Research is desperately needed because more people than ever are being stricken with these disorders, and there is no one cure that is guaranteed to work for everyone. We **are** making progress in the fight against these diseases—every year the chances for survival are increasing, thanks to advances in medical research.

You can help the thousands of patients battling this disease by:

- ♦ donating your blood, platelets and bone marrow;
- ♦ financially supporting our research efforts to treat and cure aplastic anemia, myelodysplastic syndromes, and other bone marrow diseases such as PNH.
